ON OUR
MECHANICAL MAINTENANCE
SKILLS COURSES

WHO IS THIS COURSE FOR?

Our First Line Mechanical Maintenance Course is the ideal solution for people new to a mechanical role or for developing the skillset of operators in order to diagnose and repair common maintenance issues. Embedding mechanical fault diagnosis, disassembly and assembly skills, delegates will find the opportunity to strip common production line equipment to component level, using a range of specialist maintenance tools and equipment. Too often, maintenance departments will resort to replacing components that could easily be fixed in house. This will increase knowledge, terminology, efficiency and reduce downtime and cost.

WHAT WILL YOU LEARN?

Mechanical safe working practices and theory are deeply embedded throughout a range practical training tasks to give delegates an understanding of:

- Maintenance H&S procedures and relevant regulations.
- Terminology relating to tools, equipment, consumables and procedures
- Introduce learners to planned, preventative and reactive maintenance procedures
- Fault diagnosis procedures, equipment and techniques
- Identifying a range of fasteners, bearings, seals, lubricants and their use
- Carry out disassembly, fault diagnosis and reassembly on a range of gearboxes, pumps, cylinders and motors
- Belt and chain tensioning, sprocket and pulley alignment
- Completing maintenance documentation

"The learning was well paced, there was plenty of time to ask questions and re-visit topics related to my industry. I would highly recommend for anyone involved in mechanical maintenance"

COURSE DURATION

4.5 days

COURSE DATES

2026

- July 13 - 17
- October 19 - 23

PRICE

£1450 per delegate

Maximum of 6 delegates

CERTIFICATION

A GET certificate of training is awarded on completion of the course
